

## 5. Head Set

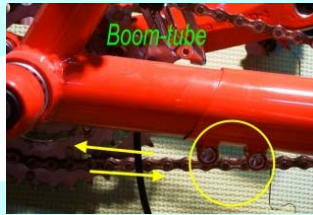

Keep locknut tight, making sure there is no play in the bearings. The fork should turn freely.

## 6. Front Wheel

Wheel should be centered in front fork with the quick release tight. Keep spokes tight and rim tube. The hub is shielded against dirt and moisture, however, it should be inspected periodically, especially after riding in rain. Remove the front wheel and turn the axle with your hands. It should move freely, with very little friction or play.

## Boom Tube Installation

To loosen the fix nut; adjust the boom tube length of suitable size. Be sure of tight the fix nut after adjusted. Boom length adjusting, do not over the limit line.

## Pedal Installation

Be sure and clean the crank arm threads and grease the threads on the pedal before mounting. Fit the pedals on the crank arms with a 15 mm wrench. The right pedal (marked R) screws onto the crank arm in a clockwise direction and the left pedal (marked L) screws on, in a counter clockwise direction.

## Special Precaution for Wet Road Conditions

Braking power is reduced in wet conditions and special care must be taken to stop safely. Proper brake adjustment and cable lubrication will help, but the major responsibility lies with the rider. Since increased lever force is required, ride more slowly and apply brakes sooner than would be necessary on dry roads.

☆ **When you wear trousers, please tie the legs of trousers before riding.**

## Warranty

Our bents warrants the replacement of original components of our bents, for defects in material and / or workmanship according to the following conditions and limitations: The frame and fork are warranted to the original purchase for 3 years, regardless of deame material all non our bents parts specified as equipment on our recumbent are warranted by the original manufacturer.
